MONTHLY WEATHER MAP

November 1961

LIBRARY JAN 26 1962 WEATHER BUREAU

General Summary of Weather Conditions

November was cool in the western part of Canada with temperatures ranging to seven degrees below normal in British Columbia. All provinces from Manitoba west experienced below normal temperatures for the month while the greatest excesses occurred in northern Quebec and on the Island of Newfoundland. November precipitation was light in almost all parts of the country except for sections of British Columbia, the upper Mackenzie valley and Nova Scotia.

In the Province of British Columbia temperatures remained consistently cool. Although there were no major outbreaks of arctic air over the province, the November temperatures averaged the lowest since 1955. There were negative temperature anomalies of one to three degrees in coastal regions,and three to seven degrees throughout the interior of the province. The coldest temperature reported in the country was -52°F at Lower Post, a station on the boundary between Yukon and British Columbia.

November precipitation was a few per cent above normal at the southern tip of Vancouver Island and on the Fraser delta. The greatest precipitation total reported anywhere in the province was 20.42 inches at Seymour Falls, a station in the mountains north of Vancouver, an excess of twenty per cent. There were precipitation excesses of about forty per cent at Smithers and from thirty to eighty per cent in the upper part of the Fraser River Valley. Aside from these and throughout the bulk of the province of British Columbia there were precipitation deficiencies which ranged to fifty per cent in the northern half of the province. In the southern interior valleys of British Columbia deficiencies were variable, and there were a few stations with normal or slightly above normal precipitation scattered through the areas. At Cape St. James on the Queen Charlotte Islands gale force winds were reported on 22 days of the month.

In the Prairie Provinces the first three days of November were cold. From the 4th onward warm air spread westward across the Prairie Provinces and on the 8th, 9th and 10th many stations reported record high temperatures for the dates. After minor temperature fluctuations throughout the month, a cold outbreak again traversed the prairies on the last few days of the month. For the month as a whole mean temperatures were one to three degrees below normal in Alberta, three degrees below normal to three degrees above in Saskatchewan and generally two to four degrees above normal throughout the province of Manitoba. The highest temperature reported from any station in the Prairie Provinces was 73 at Pierson, Manitoba, recorded on the 10th.

November precipitation was considerably below normal throughout the Peace River country and the southern grain areas of the three Prairie Provinces. Although a few scattered stations had normal or slightly above normal precipitation, there were generally deficiencies ranging to eighty per cent. Precipitation was particularly low in southern Manitoba where Portage la Prairie received only a trace. At Winnipeg, where records date back to 1874, only three Novembers have been drier than the present one. By contrast, the northern sections of Saskatchewan and Manitoba experienced generally about twice the normal precipitation for the month. Snowfall amounted to 34.4 inches at Churchill (the heaviest on record for November), while at The Pas a snow fall of 23.7 inches has been exceeded only twice since records began in 1912. November 1961 was a windy month on the prairies. At Edmonton, the mean wind speed for the month of 9.8 miles an hour was the highest November average on record. At Regina a peak gust of 82 m.p.h. was experienced on the 6th of the month.

The first two weeks of November were mild in southern Ontario. It was particularly warm on the 3rd of the month and new November high temperatures were recorded at Hamilton, Trenton and Ottawa, and new highs for the date at a number of other stations. The highest temperature recorded in Canada during the month was also on the 3rd, when St. Catharines reported 81°F. November 13th was also warm in southern Ontario with a number of stations reporting new record highs for the date. Colder weather during the second half of the month brought mean November temperatures in southern Ontario to one or two degrees above normal for the month as a whole. In northern Ontario temperatures were uniformly mild throughout the month although in the farthest north section of the province temperatures were very cold on the 30th, with a few stations reporting colder than 20 below zero. For the month as a whole,November average temperatures in northern Ontario were three to seven degrees above normal.

November precipitation was below normal throughout southern Ontario with the exception of the Windsor area where there were small excesses. This region excepted, there were deficiencies ranging to forty per cent in all southern Ontario counties. In northern Ontario above normal precipitation was experienced in a narrow belt running from Iroquois Falls westward to Lake Nipigon. In this region precipitation ranged to twice normal. Elsewhere in northern Ontario there were deficiencies ranging to fifty per cent but averaging about twenty per cent.

In the southern districts of the province of Quebec, the first half of November was mild. The high temperatures which occurred on the 3rd in Ontario reached Quebec on the 4th and Quebec City reported a new maximum for the day. The second half of the month was cooler, but mean temperatures for the month were well above normal in all districts, with the coldest temperature anywhere in the province being nine below at Port Harrison on Hudson Bay. Mean temperatures for the month were two to five degrees above normal in the Montreal area, four to six degrees above normal further down the St. Lawrence River and five to seven degrees above normal throughout the central and northern interior. The greatest anomaly in the province was recorded at Indian House Lake where there was a temperature excess of nine degrees.

November snowfall was over twice normal at a number of stations along the St. Lawrence River. Megantic experienced a snowfall for the month of 31 inches, approximately two and a half times the normal. Further east, along the north shore of the Gulf of St. Lawrence, only half the usual snowfall was experienced. Rainfall was generally light throughout the province, and the total precipitation was also below normal except at a few scattered stations. There were precipitation deficiencies of twenty to fifty per cent throughout the province.

In the Maritime Provinces, November was noteworthy for the proportion of time that the Maritimes were under the influence of cyclonic conditions resulting in frequent inflows of mild air from the Atlantic. The warmest days of the month were the 4th and 5th when a number of stations reported new high temperatures for the date. Mean temperatures for the month were two to four degrees above normal in the southern half of Nova Scotia and three to five degrees above normal throughout the remainder of the Maritime Provinces.

The prevalent cyclonic activity brought measurable precipitation to at least some part of the Maritime Provinces on all but three days of the month. However, although precipitation was frequent, it was not heavy, totals ranging from four to five inches throughout most of the area. There were excesses of up to thirty per cent in Nova Scotia and the southern half of New Brunswick while the northern half of New Brunswick and Prince Edward Island experienced precipitation deficiencies ranging to thirty per cent.

On the Island of Newfoundland November was one of the warmest on record. At Gander and St. John's Airport new record high mean temperatures were recorded, while throughout the island mean temperatures were five to seven degrees above normal. Snowfall was generally light and well below average, particularly in the central part of the island where Buchans reported only 0.1 inch compared with a normal November fall of 10.7 inches. In the eastern half of the Island there were precipitation deficiencies ranging to forty per cent in the vicinity of St. John's, but somewhat less elsewhere. On the remainder of the Island the range was from excesses of forty per cent to deficiencies of thirty per cent.

Along the Labrador coast November was mild with mean temperatures ranging from five to seven degrees above normal. Precipitation was light, especially at Hopedale where only one third of the normal fall was experienced, and at Cartwright where there was a deficiency of fifty per cent.

Mean temperatures were low in the Yukon Territory with all stations reporting five to nine degrees below normal, the latter at Mayo. Precipitation was exactly normal at Dawson and twenty per cent above normal at Mayo while other stations in the Yukon Territory experienced precipitation deficiencies which ranged from ten to fifty per cent.

November mean temperatures were much below normal throughout the mainland parts of the Northwest Territories and on Baffin Island. The greatest negative anomaly reported anywhere in Canada for the month was at Clyde in the eastern Arctic, where the November mean was 11 degrees below normal. On the western part of the Arctic Archipelago November mean temperatures were within one or two degrees of normal at all stations. On Ellesmere Island in the Eastern Arctic, November was very mild with mean temperatures of five to seven degrees above normal.

November precipitation was irregularly distributed over the Northwest Territories. As an example, of six stations reporting from the Great Slave Lake area, three had over twice the normal fall while the remaining three had deficiencies ranging to forty per cent. In the District of Keewatin all stations experienced above normal precipitation. In the eastern Arctic there were deficiencies ranging to ninety per cent at Clyde but averaging about forty per cent. At Mould Bay in the western Arctic, there was no precipitation during the month, while at Holman Island, directly south of it, there was approximately four times the normal fall.

NOVEMBER 1961
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month, including the rainfall and the equivalent of the snowfall.
SUN The total bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches, lying on the ground at the end of the month, (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
